CIS Training Courses:

ISO 27001 Security

Implementing, controlling, improving Information Security Management Systems

Optimizing security, reducing risks, increasing availability and performance – objectives critical for success can be achieved much more effectively and sustainably by establishing a management system acc. to the international Security Standard ISO/IEC 27001. The whole field of information security develops dynamically. Incidents, which range from global virus attacks to severe data losses, have made people aware of the necessity of controllable information security management systems (ISMS). As CIS General Manager Erich Scheiber stresses: "More and more leaders regard professional information security acc. to ISO 27001 as being a crucial Business Need."

ISO 27001: Security pays off

The comprehensive framework of the Certification Standard ISO 27001 and the Implementation Guide ISO 27002 makes it possible to establish an ISMS "of a piece".

The structured process approach helps to avoid problems caused by gradual single actions. Security gaps are assessed and minimized systematically. Risk analysis shows the specific security needs, profitability being an important criterion for implementing measures.

Unique worldwide: the Certificate

ISO 27001 is the only standard for information security worldwide that is certifiable and thus offers real competitive advantages and saves single evidence. Sector and topic specific supplementary standards of the ISO 27k Series, which are continually being further developed, serve as an implementation aid. As for the contents, ISO 27001 does not only include aspects relating to technical IT security but also organizational, personal and physical aspects, which range from people awareness to fire protection. Information security starts on one's own desk and ends in the fail-proof computing centre.

Information Security Manager ISO 27001

Establishing and controlling the ISMS

As an IS Manager, you will take the central position within the company where management and technological competence are equally required. You will autonomously take care of establishing, implementing and continually improving the information security management system (ISMS) and act as an interface between the top managerial level and the operational business areas. This CIS Course will safely take you to your goal – it imparts all the key elements of the international standard ISO/IEC 27001 as well as its correct interpretation and implementation in a compact and practice oriented manner. CIS is accredited for personnel certification. This means the Certificates for Individuals that are issued by CIS equal documents recognized on a national and international scale.

As the requirements placed on Information Security Managers are so high, the bow of the contents of the training is bent quite far. The course includes three modules, which can be attended independently one from another:

* the Standards ISO 27001 / ISO 27002
* psychological bases for IS Managers
* legal bases

After successful completion of the examination you will obtain the recognized Certificate "Information Security Manager acc. to ISO 27001". As a certified IS Manager, you will also meet the requirements for participating in the continuing IS Auditor Training offered by CIS.

The ISMS Standards ISO 27001-27002
2 days

Psychological Bases for IS Managers
1 day

Legal Bases for IS Managers
1 day

Exam IS Manager
1 hour

Certificate IS Manager
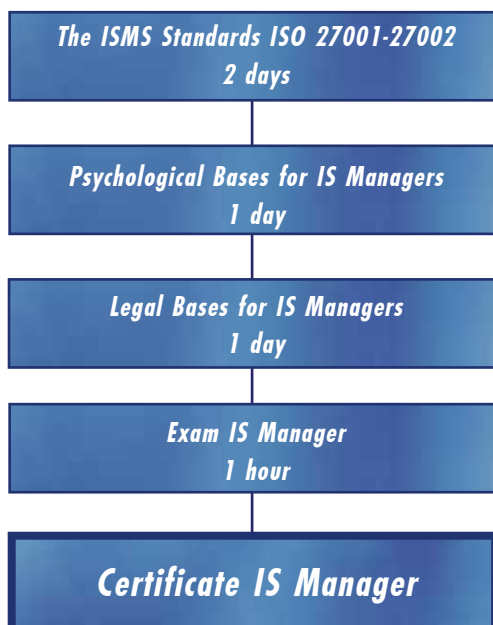

Participation fee:
The participation fee for the overall course IS Manager, including examination and certification, differs from country to country. Please have a look on the specific regional website, which you can find on the last page.
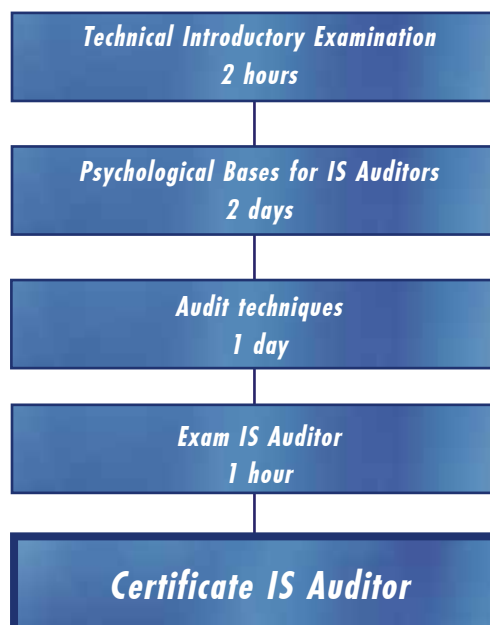

Information Security Auditor ISO 27001

Reviewing and improving the ISMS

The Training Courses IS Auditor is the ideal supplement for trained IS Managers. For as an auditor, you can conduct all internal audits yourself and also optimally prepare a company for external audits by using the methods imparted in the course. As an IS Auditor, you are the "top instance" for ISM Systems within the company. You will review information security for its conformity to the standard and elaborate opportunities for improvement before the CIS Certificate for the best possible level of security acc. to ISO/IEC 27001 is granted or prolonged. Internal audits stand the test as powerful tools to sustainably increase profitability and efficiency of the ISMS. CIS is accredited for personnel certification. This means the Certificates for Individuals that are issued by CIS equal documents recognized on a national and international scale.

The training for IS Auditors is made up of two modules:
- psychological bases for IS Auditors
- audit techniques

In order to be allowed to participate, you need a valid Certificate as an IS Manager and a positive completion of the technical entrance examination. The contents for the examination will be elaborated at self studies and include about 1,000 questions and answers. Thus a high qualification level of the auditors is guaranteed. The training opens up job opportunities in a growing market.

Technical Introductory Examination
2 hours

Psychological Bases for IS Auditors
2 days

Audit techniques
1 day

Exam IS Auditor
1 hour

Certificate IS Auditor
